CHARGES

Initial charge	0.00%
Ongoing Charges Figure*	0.77%
Included within the OCF is the Annual Management Charge**	0.65%

*The Ongoing Charges Figure (OCF) covers all aspects of operating a fund during the course of its financial year. These include the annual charge for managing the fund, administration and independent oversight functions, such as trustee, depository, custody, legal and audit fees and the ongoing costs of underlying investments including open and closed ended collective investment schemes. The OCF excludes portfolio transaction costs except for an entry/exit charge paid by the Fund when buying or selling units in another fund. This will have an impact on the realisable value of the investment, particularly in the short term. **These are the annual costs of running and managing the Fund.

RISK AND REWARD PROFILE

KEY RISKS

Past performance does not predict future returns. You may get back less than you originally invested. We recommend this fund is held long term (minimum period of 5 years). We recommend that you hold this fund as part of a diversified portfolio of investments.

Overseas investments may carry a higher currency risk. They are valued by reference to their local currency which may move up or down when compared to the currency of the Fund. This Fund may have a concentrated portfolio, i.e. hold a limited number of investments. If one of these investments falls in value this can have a greater impact on the Fund's value than if it held a larger number of investments. The Fund may encounter liquidity constraints from time to time. The spread between the price you buy and sell shares will reflect the less liquid nature of the underlying holdings. Outside of normal conditions, the Fund may hold higher levels of cash which may be deposited with several credit counterparties (e.g. International banks). A credit risk arises should one or more of these counterparties be unable to return the deposited cash. Counterparty Risk: any derivative contract, including FX hedging, may be at risk if the counterparty fails.

RISK RATIOS

Annualised over three years	
Alpha	-4.97%
Beta	0.89
Information Ratio	-0.66
Annualised over five years	
Portfolio volatility	17.78%
Benchmark volatility	16.90%

Where the Fund has a short track record, the ratios shown may be based upon the historic data of the Fund as well as a representative fund or the ratio may be calculated over a shorter time period. Calculated monthly.

- The Fund is categorised 6 primarily for its exposure to US equities.
- The SRRRI may not fully take into account the following risks:
 - that a company may fail thus reducing its value within the Fund;
 - overseas investments may carry a higher currency risk. They are valued by reference to their local currency which may move up or down when compared to the currency of the Fund.
- Credit Counterparty Risk: outside of normal conditions, the Fund may hold higher levels of cash which may be deposited with several credit counterparties (e.g. international banks). A credit risk arises should one or more of these counterparties be unable to return the deposited cash.
- Diversification Risk: the fund is expected to invest in companies predominantly in a single country which may be subject to greater political, social and economic risks which could result in greater volatility than investments in more broadly diversified funds.
- Liquidity Risk: the fund may encounter liquidity constraints from time to time. The spread between the price you buy and sell shares will reflect the less liquid nature of the underlying holdings.
- ESG Risk: there may be limitations to the availability, completeness or accuracy of ESG information from third-party providers, or inconsistencies in the consideration of ESG factors across different third party data providers, given the evolving nature of ESG.
