Risk and Reward Profile

Lower risk ← Higher risk
 Typically lower rewards Typically higher rewards

Why is this Fund in category 6?

The Fund is rated 6 due to its exposure to shares and stocks, and the nature of its investments which include the risks listed below. These factors may impact the value of the Fund's investments or expose the Fund to losses.

Investing in international companies means that currency exchange rate fluctuations will have an impact on the Fund.

The price of shares and the income from them may fall as well as rise and investors may not get back the amount they have invested.

The Fund may invest in companies based in emerging markets which may involve additional risks not typically associated with other more established markets such as increased risk of social, economic and political uncertainty.

Investing in CIS and ETF may lead to payment by the Fund of additional fees and expenses in relation to those CIS.

The ability to trade REITs may be more limited than other stocks.

What do these numbers mean?

They rate how a fund might behave and how much risk there is to your capital. Generally, the chance to make large gains means a risk of suffering large losses.

A **Category 1** fund is not a risk-free investment - the risk of losing your money is small, but the chance of making gains is also limited. With a **Category 7** fund, the risk of losing your money is high but there is also a chance of making higher gains. The seven-category scale is complex (for example, 2 is not twice as risky as 1).

More about this rating:

This rating system is based on the average fluctuations of the prices of funds over the past 5 years - that is, by how much the value of their assets taken together has moved up and down. Historical data, such as is used in calculating the synthetic risk indicator, may not be a reliable indication of the future risk profile of the Fund.

For a more detailed explanation of risks, please refer to the "Risk Factors" section of the prospectus.
