## Fund commentary

The Russell Investments Global Opportunities Fund underperformed the benchmark in the June quarter.

Contributing to the Fund's underperformance was poor stock selection in the US, including an underweight to Amazon.com and a zero exposure to Tesla. Our underweight to the US also weighed on performance. We maintain our preference for non-US equities over US equities; a view driven largely by expensive relative valuations. Performance was also impacted by poor stock selection in Asia Pacific ex Japan, including an overweight to South Korea's Samsung Electronics. In terms of sectors, stock selection was weakest within the healthcare space; notably an overweight to Switzerland's Roche Holding. Performance was further impacted by our active positioning strategy, which was positioned in favour of value and quality to complement our strategic factor positioning. In contrast, the Fund benefited from strong performances by several of our regional specialists, including Nissay Asset Management (Japan) and RWC Partners (emerging markets). In particular, the Fund benefited from an ex-benchmark holding in Japanese amusement store chain, ROUND ONE Corp., and an overweight to Taiwan's MediaTek. Other key holdings to add value during the period were overweights to US names MercadoLibre, D.R. Horton and Square, and short positions in the UK's HSBC and Royal Dutch Shell.

### ESG data

|                     | Fund   | Benchmark |
|---------------------|--------|-----------|
| ESG Risk Score**    | 24.40  | 23.88     |
| Carbon Footprint*** | 199.89 | 163.24    |
| Tobacco Exposure    | 0.00%  | 0.72%     |

\*\* Higher scores imply higher ESG risk

\*\*\* Higher score implies greater carbon exposure

The ESG Risk Score is the weighted average of the Sustainalytics' Risk Score for companies in the portfolio. The Sustainalytics' Risk Score focuses on ESG issues that are financially material to the company and incorporates both risk exposure and issue management. The scores range from 0 to 100 where higher scores imply higher ESG risk. The carbon footprint is the weighted average carbon intensity of the Scope 1 (direct) and Scope 2 (electricity consumption) carbon emissions of companies in the portfolio, measured in metric tons of carbon dioxide equivalent (CO<sub>2</sub>-e) divided by company revenue (USD). Tobacco exposure is defined as the weight of securities in the portfolio classified as being in the GICS tobacco subindustry.
