

Artemis Funds (Lux) – Global Focus

Legal Entity Identifier: 549300SP149UJVFU5798

This document provides you with information about the environmental and/or social characteristics of this fund. It is not marketing material. The information is required by law under the Sustainable Finance Disclosures Regulation (“SFDR”) and the related Regulatory Technical Standards (“RTS”). You are advised to read it so you can make an informed decision about whether to invest.

Summary

The fund promotes environmental or social characteristics but does not have as its objective sustainable investment.

The fund invests principally (at least 80% of its assets) in equities of companies selected on a global basis. The fund is actively managed.

The Investment Manager aims to identify long-term growth trends that are not seasonal or cyclical or dependent on current economic events. Companies are identified which may benefit from these trends and which exhibit characteristics such as high and persistent barriers to entry, competent management teams whose remuneration is aligned to the success of the company, exposure to external factors and high governance standards.

The fund promotes environmental characteristics through principally investing in companies which have a low carbon intensity (Scope 1 and 2 emissions) and/or discernible and viable carbon transition plans. This is evidenced by the setting of meaningful emissions reduction targets and management commitments. Carbon intensity is measured in tons of CO₂e per million USD of sales.

The Investment Manager considers several quantitative and qualitative indicators to assess the environmental impact of current or potential holdings which are assessed as part of the fundamental investment analysis. The indicators which the Investment Manager may consider include (subject to data availability):

- carbon intensity and absolute GHG emissions (Scope 1 and 2);
- board diversity;
- board independence;
- remuneration policies;
- target set (short/medium/long term);
- carbon reduction targets and/or viable carbon transition plans; and
- whether companies are actively managing their carbon exposure

Industry and company specific sustainability factors will also impact which indicators are considered in addition to the above.

The Investment Manager also considers the principal adverse impact indicators (PAIs) listed in Table 1 of Annex 1 of SFDR RTS as appropriate and subject to data availability.

The Investment Manager will maintain a minimum percentage of 50% of investments which are aligned with the environmental characteristics promoted by the fund, and a minimum percentage of 15% of investments which are deemed to be Sustainable Investments in accordance with Artemis’ firm-wide framework for assessing Sustainable Investments in accordance with Article 2(17) of SFDR.

The Investment Manager also implements a range of exclusions which prevent investment in specific activities deemed to be environmentally or socially harmful, compliance with which is monitored on an ongoing basis.

The Investment Manager uses a range of data sources, which include qualitative and quantitative data, to assess the environmental characteristics of investments, including third party data vendors, sell-side research providers and publicly available research and data from organisations such as

research institutes, non-governmental organisations and industry-wide initiatives. Investee companies in different geographies and industries are subject to different regulatory regimes and can therefore have varying levels of disclosure standards for sustainability data. The lack and/or inconsistency of corporate disclosures can limit the sustainability-related data available to the Investment Manager. In particular, there can be a lack of adequate data availability for certain PAIs.

The Investment Manager actively engages with investee companies and votes at meetings where eligible to do so. Engagement with companies is primarily via calls or face-to-face meetings with senior management, investor relations and/or members of the board and forms an important source of information to inform investment decisions.

The fund's benchmark, MSCI AC World Index, has not been designated as a reference benchmark for the purpose of attaining the environmental characteristics promoted by the fund.

No sustainable investment objective

The fund promotes environmental or social characteristics but does not have as its objective sustainable investment.

The Investment Manager has committed to maintaining a minimum percentage of at least 15% of the fund in companies which are deemed to be Sustainable Investments. In accordance with Artemis' firm-wide methodology for Sustainable Investments, a company is excluded from being classified as a Sustainable Investment if it fails certain screens to assess whether the investment causes significant harm. Further details can be found on our website: [Sustainability-related disclosures | Artemis \(artemisfunds.com\)](https://www.artemisfunds.com/sustainability-related-disclosures).

The Investment Manager also applies certain exclusions which prevent investment in specific activities deemed to be environmentally or socially harmful. The specific exclusions for the fund include:

- Tobacco (companies which derive more than 5% revenue from tobacco production),
- Weapons (companies involved in the production of controversial weapons (including cluster munitions, landmines, biological and chemical weapons) or which derive more than 10% revenue from the manufacture and retail of civilian firearms and ammunition),
- Fossil fuels (companies which derive more than 10% revenue from mining, sale or power production from thermal coal or production of arctic oil and gas or extraction of oil sands) and
- Companies that the Investment Manager determines to be in breach of the United Nations Global Compact principles on human rights, labour rights, the environment and anti-corruption.

The Investment Manager monitors positive and negative sustainability-related newsflow including controversies, which would normally include serious violations of OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights. Although the fund does not automatically exclude companies which are deemed to be in violation of the OECD Guidelines for Multinational Enterprises or the UN Guiding Principles on Business and Human Rights from the investable universe, such companies would not be considered Sustainable Investments of the fund. The Investment Manager undertakes ongoing monitoring of any companies in the fund which are subject to controversies.

The Investment Manager also considers the PAIs as appropriate and subject to data availability.

Environmental or social characteristics of the fund

The fund promotes environmental characteristics through principally investing in companies with a low carbon intensity (Scope 1 and 2 emissions) and/or discernible and viable carbon transition plans. This is evidenced by the setting of meaningful emissions reduction targets and management commitments. Carbon intensity is measured in tons of CO₂e per million USD of sales. The Investment Manager also applies a range of exclusions which prevent investment in specific activities deemed to be environmentally or socially harmful.

The Investment Manager considers the PAIs as appropriate and subject to data availability. The Investment Manager deems the following PAIs to be most relevant to the Fund:

- Greenhouse gas (GHG) emissions - Scope 1, Scope 2 and Scope 3 GHG emissions (PAI 1);
- Carbon footprint (PAI 2);
- GHG intensity of investee companies (PAI 3);
- Exposure to companies active in the fossil fuel sector (PAI 4);
- Violations of UN Global Compact principles and OECD Guidelines for Multinational Enterprises (PAI 10); and
- Exposure to controversial weapons (cluster munitions, chemical weapons, biological weapons) (PAI 14).

Investment strategy

The fund invests principally (at least 80% of its assets) in equities of companies selected on a global basis. The fund is actively managed. The Investment Manager aims to identify long-term growth trends that are not seasonal or cyclical or dependent on current economic events. Companies are sought which may benefit from these trends and which exhibit characteristics such as high and persistent barriers to entry, competent management teams whose remuneration is aligned to the success of the company, exposure to external factors, and high governance standards.

The Investment Manager assesses the sustainability of each investment using a range of quantitative and qualitative sustainability factors as appropriate for each investment and subject to data availability. The sustainability metrics are assessed alongside traditional financial metrics.

The sustainability indicators which are used to measure the attainment of the environmental characteristics will vary for each investment depending on the specific circumstances relevant to each investment. Some examples of indicators which may be used, subject to data availability, are:

- carbon intensity and absolute GHG emissions (Scope 1 and 2);
- targets set (short/medium/long term);
- carbon reduction targets and/or viable carbon transition plans;
- board diversity;
- board independence;
- whether companies are actively managing their carbon exposure; and
- remuneration policies.

Other industry- and company-specific sustainability factors may also be considered as appropriate for each investment.

An assessment of good governance practices is an integral part of the investment analysis for all investments. The Investment Manager takes a principles-based approach to good governance and the factors which are relevant to this assessment may vary depending on the specific circumstances relevant to an investee company, such as geographical market, legal or regulatory jurisdiction and/or industry segment. An assessment of good governance is undertaken through our own fundamental analysis and via controversy screens and considers a variety of qualitative and quantitative elements such as capital allocation, board structure and independence, alignment of compensation, transparency of ownership, audit and accounting. Any company that is subject to serious controversies relating to its business activities will be excluded from being deemed a Sustainable Investment of the fund.

The Investment Manager applies a process of negative screening as part of the fund's investment strategy to automatically exclude potential investments in companies operating in certain industries, involved in certain business activities or which do not meet certain standards. Formal investment exclusions are set up into the compliance module of the Investment Manager's order management system to ensure that no investment in companies that undertake these activities can be made. The formal exclusions are as follows:

- Tobacco (companies which derive more than 5% revenue from tobacco production),
- Weapons (companies involved in the production of controversial weapons (including cluster munitions, landmines, biological and chemical weapons) or which derive more than 10% revenue the manufacture and retail of civilian firearms and ammunition),
- Companies that the Investment Manager determines to be in breach of the United Nations Global Compact principles on human rights, labour rights, the environment and anti-corruption, and
- Fossil fuels (companies which derive more than 10% revenue from mining, sale or power production from thermal coal; or production of arctic oil and gas or extraction of oil sands).

Proportion of investments

The planned asset allocation of the fund is as follows:

- #1 Aligned with E/S characteristics includes the investments of the fund used to attain the environmental characteristics promoted by the fund, as described above.

- #2 Other includes the remaining investments of the fund which are not aligned with the environmental characteristics of the fund. This includes cash and equivalent liquid positions and derivatives, and any securities that do not align with the fund's environmental characteristics.
- The sub-category #1A Sustainable covers investments deemed to be Sustainable Investments in accordance with Artemis' firm-wide methodology for assessing Sustainable Investments.
- The sub-category #1B Other E/S characteristics covers investments aligned with the environmental characteristics promoted by the fund that do not qualify as Sustainable Investments in accordance with Artemis' firm-wide methodology for assessing Sustainable Investments.

For Box #1, whilst sustainability analysis is conducted on all holdings, the figure represents the percentage of investments aligned to the specific environmental characteristics promoted by the fund, as described above.

Monitoring of environmental or social characteristics

The fund is subject to a range of binding exclusions which prevent investment in specific activities deemed to be environmentally or socially harmful. Sustainability data from third party data vendors is used to set up these exclusions in the compliance module of the Investment Manager's order management system.

The fund is also subject to a binding commitment to maintain a minimum percentage of 50% of investments which are aligned with the environmental characteristics promoted by the fund, and a minimum percentage of 15% of investments which are deemed to be Sustainable Investments in accordance with Artemis' firm-wide framework for assessing Sustainable Investments. Compliance with these minimum requirements is also set up in the order management system and is monitored on a regular basis.

Methodologies

The sustainability indicators which are used to measure the attainment of environmental characteristics will vary for each investment depending on the specific circumstances relevant to each investment. Some examples of indicators which may be used, subject to data availability, are:

- carbon intensity and absolute GHG emissions (Scope 1 and 2);
- targets set (short/medium/long term);
- carbon reduction targets and/or viable carbon transition plans;
- board diversity;
- board independence;
- whether companies are actively managing their carbon exposure; and
- remuneration policies.

Other industry- and company-specific sustainability factors may also be considered as appropriate for each investment.

The Investment Manager will maintain a minimum percentage of 50% of investments which are aligned with the environmental characteristics promoted by the fund, and a minimum percentage of 15% of investments which will be deemed to be Sustainable Investments in accordance with Artemis' firm-wide framework for assessing Sustainable Investments in accordance with Article 2(17) of SFDR. The Investment Manager also implements a range of exclusions which prevent investment in specific activities deemed to be environmentally or socially harmful, compliance with which is monitored on an ongoing basis.

The Investment Manager also considers the PAIs as appropriate and subject to data availability.

Data sources and processing

The Investment Manager uses a range of data sources, which include qualitative and quantitative data, to assess the sustainability characteristics of investments, including third party data vendors, sell-side research providers and publicly available research and data from organisations such as research institutes, non-governmental organisations and industry-wide initiatives. These sources of information supplement our own research and analysis, including our assessments as a result of engagement with companies.

Limitations to methodologies and data

Investee companies in different geographies and industries are subject to different regulatory regimes and can therefore have varying levels of disclosure standards for sustainability data. The lack and/or inconsistency of corporate disclosures can limit the sustainability-related data available to the Investment Manager. In particular, there can be a lack of adequate data availability for certain PAIs set out in Table 1 of Annex 1 of the SFDR RTS. Whilst overall levels of quantity and quality of sustainability-related disclosures from companies is improving, the current gaps in disclosures may constitute a limitation of data available to the Investment Manager. In addition to potential gaps in disclosures, data issued by the investee company may also be lagged if it has been taken from the latest periodic statement published by the investee company.

Artemis receives sustainability data from third party data vendors and research providers. Third party data vendors and research providers may refer to the most recently available data issued by the investee company or make an estimation based on their proprietary research and analysis. Where relevant sustainability data is not available from a primary third-party data source, Artemis may make an assessment, on a best-efforts basis, using alternative data sources or available research to the extent appropriate.

Artemis relies on MSCI as our primary sustainability data vendor and data sourced from this vendor is used to implement and monitor compliance with sustainability-related requirements for the fund, including the fund's binding exclusions. Consistency of sustainability-related data between different data vendors can be low due to divergent approaches to their methodologies and assessments.

Due diligence

The Investment Manager conducts due diligence on all investee companies both prior to investment and on an ongoing basis. The factors which are relevant to this due diligence will vary depending on the specific investment. The assessment of sustainability factors feeds into the overall fundamental assessment of an investment, which includes analysis of the business model, financial model, company management and valuation.

The fund is regularly monitored for market risk and exposures within the portfolio by the independent Investment Risk team reporting to the Artemis Chief Risk Officer. The Investment Risk team also undertakes a quarterly review of each investment strategy, including any significant ESG risk factors.

Compliance with the binding sustainability criteria applicable to the fund is monitored regularly and coded into the Investment Manager's order management system where appropriate.

Engagement policies

The Investment Manager actively engages with investee companies and votes at meetings where eligible to do so. Engagement with companies is primarily via face-to-face meetings or calls with senior management, investor relations and/or members of the board and forms an important source of information to inform investment decisions. Engagement can also provide insight into a board's capabilities and dynamics. Although a single engagement event is unlikely to lead to an investment decision, a series of meetings in combination with internal analysis can be an influence on investment decisions. Therefore, engagement is one of the means by which we develop our understanding of companies, raise issues with management and monitor subsequent developments.

Further details on Artemis' engagement and voting policy can be found on the Artemis website: <https://www.artemisfunds.com>.

Reference benchmark

An index has not been designated as a reference benchmark to meet the environmental characteristics promoted by the fund.

The fund's benchmark, MSCI AC World Index, has not been designated as a reference benchmark for the purpose of attaining the environmental characteristics promoted by the fund.

Important information

Before making any final investment decisions and to ensure you understand whether this fund is suitable for you, please read the Key Investor Information which is available, along with the fund's Prospectus from www.artemisfunds.com or www.fundinfo.com

Artemis does not provide investment advice on the advantages or suitability of its products and no information provided should be viewed in this way. Artemis only provides information about its own products and services and does not advise investors. Should you be unsure about the suitability of an investment, you should consult a suitably qualified professional adviser.

Investment in a fund concerns the acquisition of units/shares in the fund and not in the underlying assets of the fund. The fund is a sub-fund of Artemis Funds (Lux) (a "SICAV"). For further information, visit www.artemisfunds.com/sicav.
