### What is this product?

**Type:**

This product is a UCITS Fund.

**Term:**

Open Ended Fund.

**Objectives:**

Alger SICAV - Alger Weatherbie Specialized Growth Fund (the "Fund") is actively managed and seeks long-term capital appreciation.

The Fund generally invests at least two-thirds of its net assets in equity securities of smallcap and midcap companies which demonstrate promising growth potential. Smallcap or midcap companies are companies that, at the time of purchase, have total market capitalization within the range of companies included in the Russell 2500 Growth Index or the Russell Midcap Growth Index, respectively, as reported by the indexes as of the most recent quarter

end. The Fund is not managed in reference to those indexes.

The Fund intends to invest a substantial portion of its assets in a smaller number of issuers, and may focus its holdings in fewer business sectors or industries. The Fund will hold approximately 50 holdings. The number of holdings held by the Fund may occasionally exceed this range for a variety of reasons. The Fund may also invest a significant portion of its assets in securities of companies conducting business within a single sector, including the information technology, consumer discretionary, health care, and industrials sectors.

The Fund can invest in financial derivative instruments for hedging purposes and for efficient portfolio management purposes.

**Intended retail investor:**

This product is intended for investors who are prepared to take on a relatively high level of risk of loss to their original capital in order to get a higher potential return, and who plan to stay invested for at least 5 years. It is designed to form part of a portfolio of investments.

### What are the risks and what could I get in return?

#### Risk Indicator

The actual risk can vary significantly if you cash in at an early stage and you may get back less.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 5 out of 7, which is a medium-high risk class. This rates the potential losses from future performance at a medium-high level and poor market conditions will likely impact the value of your investment.

Small and mid-capitalization companies may be more sensitive to market changes and may be subject to more abrupt or erratic price movements than the securities of large companies. The Fund may invest in derivatives which may have a large impact on the Fund's performance.

**Be aware of currency risk. You will receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.**

For other risks materially relevant to the product which are not taken into account in the summary risk indicator, please read the product's Annual Report or Prospectus available at [www.alger.com](http://www.alger.com).

This product does not include any protection from future market performance so you could lose some or all of your investment.

## Performance scenarios

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the Fund over the last 10 years.

The stress scenario shows what you might get back in extreme market circumstances.

Recommended Holding Period: 5 years			
Investment: GBP 10,000			
Scenarios		If you exit after 1 year	If you exit after 5 years (recommended holding period)

<sup>3</sup> This type of scenario occurred for an investment between April 2016 and April 2021.

## What happens if Alger SICAV is unable to pay out?

You may face a financial loss should the Management Company or the depositary/custodian, The Bank of New York Mellon SA/NV, Luxembourg Branch, default on their obligations.

There is no compensation or guarantee scheme in place which may offset, all or any of, this loss.

## What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the

product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed, in the first year you would get back the amount that you invested (0% annual return). For the other holding period, we have assumed the fund performs as shown in the moderate scenario.

Investment: GBP 10,000	If you exit after 1 year	If you exit after 5 years
<b>Total costs</b>	147 GBP	1,239 GBP
<b>Annual cost impact (*)</b>	1.5%	1.6%

(\*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 14.5% before costs and 13.0% after costs.
