

Key Investor Information

This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Neuberger Berman Sustainable Asia High Yield Fund (the "Fund")

a sub-fund of Neuberger Berman Investment Funds plc

USD Z Distributing Class, IE000HTH7XL4

This Fund is managed by Neuberger Berman Asset Management Ireland Limited.

OBJECTIVES AND INVESTMENT POLICY

The Fund aims to outperform the J.P. Morgan JESG JACI High Yield Index (Total Return, USD) ("Benchmark") before fees over a market cycle (typically 3 years) by primarily investing in below investment grade rated hard currency-denominated (defined for the purpose of this Fund as USD, EUR, GBP, JPY, CHF) debt instruments issued in Asian countries that comply with the Sustainable Criteria.

There can be no guarantee that the Fund will ultimately achieve its investment objective and capital invested is at risk.

In selecting securities for investment, the Fund will prioritise issuers which:

- have a lower carbon emission intensity, as measured relative to the carbon intensity reduction of the broad Asia high yield debt universe, represented by the J.P. Morgan Asian Credit High Yield Index (the "Index").
- demonstrate better environmental, social and governance ("ESG") practices, as measured by aiming to achieve a higher ESG score compared to the broader Asia high yield debt universe, represented by the Index.

The Fund is managed with a disciplined approach which begins with analysis of the market environment and the global economy. Within this framework, the Fund's approach involves forming a view on the economic outlook, identifying asset classes with attractive valuations and liquidity. This approach provides the basis for the Fund's asset allocation, country and currency weighting. Investment selection is the result of fundamental analysis that aims to identify issuers that are believed to be undervalued and comply with the Sustainable Criteria.

The Fund is actively managed and does not intend to track the Benchmark and is not constrained by it which is used for performance comparison purposes. The Fund's investment policy restricts the extent to which the Fund's holdings may deviate from the Benchmark. This deviation may be significant.

The Fund promotes environmental and social characteristics within the meaning of Article 8 of SFDR.

This Fund may not be appropriate for short-term investment and is more suitable as part of a diversified portfolio.

You may sell your shares on any day when the financial markets in Singapore, London and New York are open for business.

Your shares pay you a dividend on a quarterly basis.

Transaction costs will reduce the Fund's return.

RISK AND REWARD PROFILE

This Fund is in category 5 due to its level of historical volatility. As the share class has less than 5 years of returns history, the historical volatility includes benchmark/representative portfolio returns. The Fund invests in a variety of investments, some of which can vary significantly in price from day to day due to a number of factors.

The main risks facing the Fund are:

- Market Risk:** The risk of a change in the value of a position as a result of underlying market factors, including among other things, the overall performance of companies and the market perception of the global economy. In addition, as the Fund invests in businesses that are connected with less advanced countries and economies, certain risks exist. The market for investments in such countries may be less developed making it difficult for the Fund to sell its investments in such markets and political and social instability may lead to a reduction in the value of the investments in such countries. Accounting and auditing standards and availability of financial information may vary across the markets in which the Fund invests.
- Liquidity Risk:** The risk that the Fund may be unable to sell an investment readily at its fair market value. This may affect the value of the Fund and in extreme market conditions its ability to meet redemption requests upon demand. To counter this risk the Fund actively monitors the liquidity of its investments. Furthermore, certain segments of global fixed income markets may experience periods of lower liquidity caused by market events or large sales and raise the risk that securities or other fixed-income instruments cannot be sold during those periods or sold at reduced prices. Those events may challenge the Fund to meet significant volumes of redemption requests and may also influence the value of the Fund as the lower liquidity may be reflected in a reduction in the value of the Funds' assets.
- Counterparty Risk:** The risk that a counterparty will not fulfil its payment obligation for a trade, contract or other transaction, on the due date. The insolvency of any institution providing services such as the safekeeping of assets or acting as counterparty in respect of derivatives or other instruments may expose the Fund to financial loss.
- Credit Risk:** The risk that bond issuers may fail to meet their interest repayments, or repay debt, resulting in temporary or permanent losses to the Fund. This risk is greater than average for investments with a lower credit rating.
- Interest Rate Risk:** The risk of interest rate movements affecting the value of fixed-rate

bonds. Longer maturity bonds are more sensitive to changes in interest rates with the risk usually decreasing for bonds of lower rating and shorter duration.

- Derivatives Risk:** The Fund is permitted to use certain types of derivative instruments (including certain complex instruments) to obtain or increase exposure to its underlying assets, or to achieve 'short' positions where the Fund may benefit from a fall in the value of an underlying asset, or to seek to protect its assets against some of the risks outlined in this section. This may increase the Fund's leverage significantly. Leverage is an investment technique which gives an investor a larger exposure to an asset than the amount it invested, which can cause large variations (both positive and negative) in the value of your shares. As a result of its use of derivatives, the Fund may have an exposure of over 100% of its Net Asset Value, which may result in a significant loss to the Portfolio. Please refer to the Prospectus for a full list of the types of derivative that the Fund may utilise.
- Operational Risk:** The risk of direct or indirect loss resulting from inadequate or failed processes, people and systems including those relating to the safekeeping of assets or from external events.
- Concentration Risk:** The Fund's investments may be concentrated in a small number of investments or in bonds issued by a small number of issuers and its performance may therefore be more variable than the performance of a more diversified fund.
- Currency Risk:** Investors who subscribe in a currency other than the base currency of the Fund are exposed to currency risk. Fluctuations in exchange rates may affect the return on investment. If the currency of this share class is different from your local currency, then you should be aware that due to exchange rate fluctuations the performance shown may increase or decrease if converted into your local currency.
- Sustainable Risk:** The Fund may focus on investments in companies that relate to certain sustainable development themes and demonstrate adherence to environmental, social and corporate governance practices. This may mean the universe of securities from which the Fund can invest in may be smaller than that of other funds and may underperform the market as a result.

For a more detailed explanation of risks, please refer to the "Investment Restrictions" and "Investment Risks" section of the Prospectus.

A category 1 fund is not a risk free investment - the risk of losing money is smaller than that of a category 7 fund, but the likelihood of making gains is also lower. The seven category scale is complex: for example, a category 2 fund is not twice as risky as a category 1 fund.

The category is calculated using past data, which cannot be used as a prediction for the future. Therefore the risk classification may change over time.

CHARGES

One-off charges taken before or after you invest	
Entry Charge	None
Exit Charge	None
This is the maximum that might be taken out of your money before it is invested or before the proceeds of your investment are paid out.	
Charges taken from the fund over a year	
Ongoing Charges	0.20%
Charges taken from the fund under certain specific conditions	
Performance Fee	None

These charges are used to pay the costs of running the Fund, including the costs of marketing and distributing it.

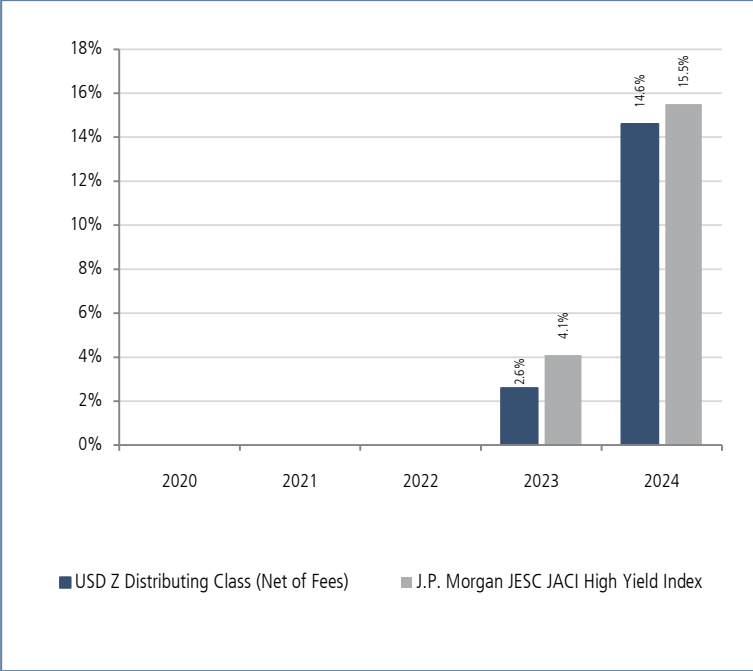

These charges reduce the potential growth of your investment.

The one-off charges shown are the maximum figures. In some cases they may be less. You can find out your actual charges from your financial adviser.

The ongoing charges figure is based on the expenses for the period ending 31 December 2024. This figure may vary from year to year.

You can find more details on these charges in the "Fees and Expenses" section of the Prospectus.

PAST PERFORMANCE

Past performance is not a reliable indicator of future results.

The past performance takes account of all charges and costs.

The value of this class is calculated in US Dollars.

The Fund launched on 13 December 2021.

This class started to issue shares on 22 March 2022.

The performance is compared against J.P. Morgan JESC JACI High Yield Index.
