

## Performance scenarios

The figures shown include all the costs of the product itself, but may not include all the costs that you pay to your advisor or distributor. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What you will get from this product depends on future market performance. Market developments in the future are uncertain and cannot be accurately predicted.

The unfavourable, moderate, and favourable scenarios shown are illustrations using the worst, average, and best performance of the Fund over the last 10 years.

The stress scenario shows what you might get back in extreme market circumstances.

## What happens if Alger SICAV is unable to pay out?

You may face a financial loss should the Management Company or the depositary/custodian, The Bank of New York Mellon SA/NV, Luxembourg Branch, default on their obligations.

There is no compensation or guarantee scheme in place which may offset, all or any of, this loss.

## What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the

product does. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed, in the first year you would get back the amount that you invested (0% annual return). For the other holding period, we have assumed the fund performs as shown in the moderate scenario.

Investment: USD 10,000	If you exit after 1 year	If you exit after 5 years
<b>Total costs</b>	227 USD	1,749 USD
<b>Annual cost impact (*)</b>	2.3%	2.4%

(\*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 13.5% before costs and 11.1% after costs.
